#### Addition of the CompoSMOOTH Brush & Application Insert Set

The CompoSMOOTH, a special silicon brush, allows an easy adaption and modelling of the composite surface before polymerisation. Even 'sticky' composites can be adapted in an optimal way. The perfect surface morphology is created by only slight pressure.

For full details and video see

<http://zepfdental.com.au/zepf-product-highlights/composmooth/>

Set includes

Code 19.200.00 CompoSMOOTH Brush Holder

Code 19.201.11 Soft Application Insert - tapered - Set 12

Code 19.201.21 Soft Application Insert - flat - Set 12

Code 19.201.31 Soft Application Insert - pointed - Set 12

### For Extraction

Zepf Catalogue Ref. 05-28

#### Upgrade of Extraction Forceps to RoBa edition

With the patented design, RoBa is the advancement of conventional extracting forceps with the advantages of a tapered deep grip. The modified beaks fit exactly on the teeth which ensures a maximum grip on the appliance. The new beaks are available for all figures in the upper and lower jaw.

The billow grind claws radially into the teeth and avoids a 'riding' between the tooth crown and the inner contour of the beak.

Concavely elaborated inner contours of the forceps beak fit in the convex tooth contour. With deep grip in the alveolus on the neck of the tooth or crown, RoBa ensures a parallel and maximum grip.

#### Addition of the Benex II Extraction System

In modern dentistry, Implantology following extraction is favoured.

Benex II provides gentle & simple extraction of roots over the whole mouth.

Damage to soft tissue and the surrounding bone is minimised.

Due to the longitudinal extraction method, Benex II provides the optimal base for direct implantation. It is also a valuable aid for retarded implantation after extraction.
