### With an extra small head

The endodontics system

## Endea NiTi contra-angle handpieces for nickel-titanium files

#### Record treatment times with an extra small head

The new Endea NiTi contra-angle handpieces with their extra small heads provide even better access to the treatment area. Root canal preparation with 360° rotation is possible using both the »crowndown« and the »single-length« techniques.

Whether using an electric, an air or a torque-controlled motor, the Endea NiTi contra-angle handpiece EB-75 (16:1) enables all commercially available files to reach the required speeds.

16:1

New: the extremely small head gives the best possible access to the area of treatment

Maximum precision, speed and efficiency through 360° rotation

Entran cordless endodontic handpiece

Independence with an extra small head

With the cordless Entran handpiece you have absolute freedom of movement.

Five different torque levels, in combination with the »auto reverse/auto forward« modes, ensure safe treatment.

The powerful, long-life Li-ion battery enables up to 30 treatments to be carried out without having to recharge.

Cordless endodontics with Entran

# Endo Cursor contra-angle handpieces for hand files

Precision and safety with illumination

Use your tried and tested hand files in mechanical root canal preparation with Endo Cursor. Using the »balanced force« technique, the root canal is prepared by the files' reciprocating motion (approximately 60°). This is a similar motion to manual endodontics but the treatment is faster, more cost-effective and easier. The large, powerful light source included in the LT version provides precise illumination for perfect vision, even after many sterilization cycles.

Your advantage: you can carry on using your tried and tested hand files

A large, powerful light provides precise illumination while being fully sterilizable
