SOPROCARE Intraoral Camera

The SOPROCARE concept was developed to assist the dental professional during prophylaxis and periodontal treatment in the dental office. SOPROCARE reveals caries in CARIO mode, as well as new and old dental plaque in PERIO mode. SOPROCARE is the first product on the market to reveal gingival inflammation. In DAYLIGHT mode, SOPROCARE can also be used as a camera, providing all of the necessary tools to perform a complete and time efficient oral examination.

Under Perio mode, it differentiates the colour of tissue and reveals old plaque by a shade of yellow and orange. Increase patient acceptance today and reveal what they can't see under the naked eye.

DENTAL PLAQUE

The healthy teeth keep their original colour

The old plaque ranges from yellow to orange depending on its mineralization

INFLAMMATION

The healthy gum appears pale pink

A severe gingival inflammation is indicated by bright and voluminous magenta-red areas

Images made by Pr. Tassery, Head of the Preventive and Restorative Department, Marseilles Dental School, University AMU, LBN Montpellier I.
