Prof. H. Tassery, Marseilles

"In my everyday clinical practice, the Pure Reflect® mirror remains a valuable tool permitting the perfect vision of the shades and details of dental structures. It permits working without any fatigue, with or without visual aids such as magnifying glasses and microscopes. The Pure Reflect® mirror has become essential and has made traditional mirrors lapsed."

THE SURFACE IS THE KEY...

For Extraction

Upgrade of Extration Forceps to RoBa edition

With the patented design, RoBa is the advancement of conventional extracting forceps with the advantages of a tapered deep grip. The modified beaks fit exactly on the teeth which ensures a maximum grip on the appliance. The new beaks are available for all figures in the upper and lower jaw.

The billow grind claws radially into the teeth and avoids a 'riding' between the tooth crown and the inner contour of the beak.

Concavely elaborated inner contours of the forceps beak fit in the convex tooth contour. With deep grip in the alveolus on the neck of the tooth or crown, RoBa ensures a parallel and maximum grip.

Time Saving Hint...

If you have multiple brands of high speed (turbine) handpieces you can save time by purchasing a base adaptor for each coupling. This will enable you to switch between handpiece brands with ease.

Ask us about Handpiece Servicing!

Did you know that handpieces require regular servicing to maintain optimal performance? Just like the rest of your equipment, handpieces need to be on a maintenance schedule, and replaced every few years. If you are not getting optimal performance out of your handpieces, give us a call today and we can arrange to quote or assess your handpieces so that you won't have to put up with sub-performance any longer!
