## Vatech 3D Smart Plus

### SMART INNOVATION

The innovative FOV of the Smart Plus provides an arch-shaped volume, which shows a wider view of dentition compared to other devices of the same FOV. Normally, a FOV 10x8.5 image shows tooth #8. However, when the tooth is lying on its side, there is a high possibility that the tooth will be cut out of the image. The "arch-shaped volume" eliminates this possibility and shows the hidden dentition area.

Having to recently replace multiple handpieces and couplings from a different manufacturer, I spoke to several representatives and companies to source the best value options on the market. After my experience with NSK, the service, product quality and comfort of the NSK Ti-Max Z900L and associated couplings was second to none. I have found the handpieces to be exceptionally reliable and sturdy with the required torque and irrigation to make any aspect of restorative dentistry predictable in my practice.

I routinely use the NSK Osseo 100 to check the stability and osseo integration of all implants that I place. It is non-invasive and thus far superior to torque testing. It frequently indicates that an implant can be restored earlier than I would have otherwise anticipated. I find it very reassuring to have a quantitative measurement of stability that I can pass on to the restoring prosthodontist or dentist and recommend the technique to all practitioners placing dental implants.
